# Getting information about intellectual disability health

This project is about getting information about the health of people with intellectual disability.

We want to get more information about the health of people with intellectual disability.

This will help make health services better for people with intellectual disability.

Why are we doing this project

We need more information so we can make health services better.

We need to know how many people with intellectual disability use health services.

We need to know what health issues they have.

This will help us make a plan about what health care people with intellectual disability need.

What we are doing in the project

We want to use information from different health services for the project.

We want to have information about when people went to

- The hospital

- The emergency department
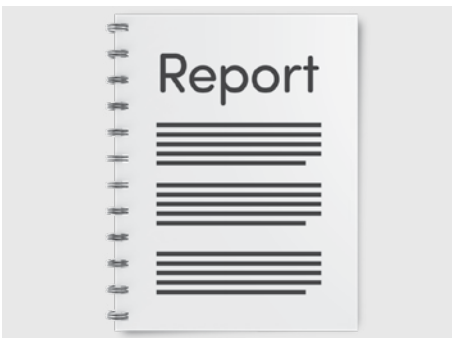

- **Mental health** services.

**Mental health** is about how we think and feel.

We will use the information to find out how many people have an intellectual disability.

We also want to know what health issues many of them have.

We will make reports about the health care people with intellectual disability get.

The reports will say things like

- How old people are

- What health issues they have

- What was done about their health issues.

About this information

National Centre of Excellence in Intellectual Disability Health made this information.
